

## Vaccinate the Children, Save the Future

### 2018 Activities

**The Problem:** Hepatitis B Virus (HBV) and clean drinking water and lack of education are major public health problems in India. The estimated HBV carrier rate in India is 4 percent, with a total pool of approximately 40 million carriers. The virus is blood-borne and spreads through bodily fluids. Although many people have access to most other vaccinations, Hepatitis B vaccinations are very expensive and are not easily accessible, especially in rural areas. **More than 600,000 Indians die each year due to complications from Hepatitis B. Lack of clean drinking water creates overall unhealthy population in India. Root of all diseases is lack of awareness of health education.**

**How We Help:** CIF travels to schools in remote villages in the states of Bihar, and Uttar Pradesh, with plans of expansion to other states. There, CIF sets up a clinic to offer free vaccinations to school children whose families cannot afford the price of a vaccination. Three doses of the vaccination offer a child lifelong protection against Hepatitis “B” disease. As a donor, you are helping to provide an underprivileged child with a healthy future. So far CIF has vaccinated more than 9500 children in 28 schools. CIF provided benefits to more than 800 children in 2018 alone. For detail, please visit:
